

OTIS WEYGANG

Software Engineer • Full-Stack

UK (Global Remote) | [linkedin.com/in/otis-weygang](https://www.linkedin.com/in/otis-weygang)

PROFILE

Software engineer with 6 years of professional experience: 2 years full-stack and backend at Bet365, 4 years in industrial control engineering at BMW. Also 8 years of web dev as a hobby and side work alongside that. Good at picking up unfamiliar codebases and stacks quickly and shipping, rather than being deep in one language. Worked professionally in Go, TypeScript, C++, and PLC languages (Ladder Logic, Function Block Diagram).

EXPERIENCE

Freelance Software Contractor — ICAHD (International Human Rights NGO)

Jan 2026 – May 2026 • Remote

TypeScript · Astro · HTML/CSS · Netlify

- Advised the organisation on technology strategy and stack choices, helping leadership pick tooling and architecture that worked within a small non-profit's budget
- Rebuilt the organisation's entire digital infrastructure, including the website, analytics and global hosting
- Built donation and payment flows integrating Stripe, GoCardless and PayPal
- Automated their social media posting schedule and redid their outreach

Software Engineer — Bet365

Nov 2023 – Nov 2025 • Manchester, UK • Hybrid

Go · TypeScript · React · Apache Kafka · KSQL · Postgres · Linux · Prometheus · Grafana

- Designed and maintained ~300 Kafka clusters across multiple business verticals, maintaining 98%+ uptime for 50+ internal engineering teams globally
- Built KafkaHub, an internal Kafka management platform: a backend Go service on a firewalled Linux server polling cluster configs, health, throughput and schemas weekly with fallbacks and retries, upserting to a database with config discrepancy flagging. Worked closely with two engineers on the frontend, including OAuth login, a live network diagram of the estate, schema search, and a live message browser with rate/duration-safeguarded temporary consumers — cutting manual cluster investigation and giving the org visibility into the Kafka estate
- Built a real-time indicators-of-harm system in Go and KSQL implementing 12 UK government-regulated rules detecting problematic betting and deposit patterns, from instant anomaly detection to year-long behavioural tracking across withdrawals, deposits and betting habits — alerts published to Kafka for downstream automated warnings, limits and blocks, generating around 1,000 alerts/day from day one
- Triageed and resolved production incidents across the Kafka estate, working directly with teams to diagnose issues and implement fixes

Control Engineering Apprentice / Maintenance Engineer — BMW Group

Jul 2018 – Jan 2023 • Oxford, UK

Siemens PLCs · Kuka · ABB Robotics · Allen Bradley · PLC Programming · Control Systems

- Completed a four-year control engineering apprenticeship on 7-on-7-off 12-hour rotating shifts alongside a First-Class BEng in Electrical Engineering, rotating through every stage of car manufacturing including welding, paint, assembly, seam seal, electronics and fuel systems
- Programmed Kuka and ABB industrial robots and maintained entire production lines including motors, conveyors, dip tanks and Siemens PLCs, diagnosing and resolving failures in an environment where downtime cost over £1 million per half hour
- Commissioned 200 Siemens PLC racks migrating legacy Allen Bradley systems across the production floor
- Repurposed a decommissioned robot and PLC kit with a custom 3D-printed tool head to automate the seam seal gun cleaning process, replacing a manual process that had been in place for years

TECHNICAL SKILLS

Languages (professional)	Go, TypeScript / JavaScript, C++, Ladder Logic, Function Block Diagram, Bash
Backend	RESTful API design, microservices architecture, event-driven systems
Messaging & Data	Apache Kafka, message queues, event streaming
Infrastructure	Linux, CI/CD (GitLab CI, GitHub Actions, Jenkins), Prometheus, Grafana, Git
Practices	Code review, production debugging, performance optimisation, API documentation

EDUCATION

BEng (Hons) Electronic Engineering — Birmingham City University

First Class Honours • IET Prize 2022 for Outstanding Achievement
